

## Chapter V

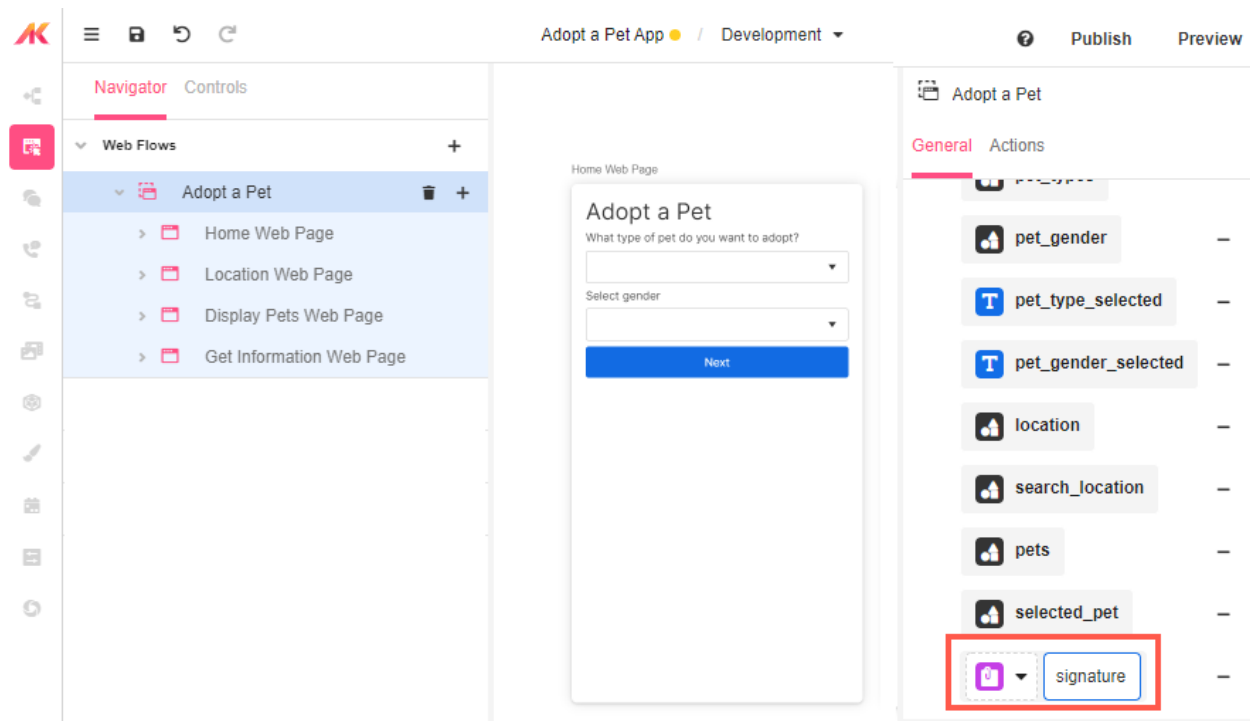

- Building the Sign Terms and Conditions Web Page
  - Creating the Variables
  - Adding and Configuring Controls
    - Configuring the Terms Container
    - Configuring the Agree Container
    - Configuring the Signature Input
    - Configuring the Review Button
- Previewing the Display Web Page

## Building the Sign Terms and Conditions Web Page

At the end of Chapter IV, we added a fifth Web Page to the app. This Web Page will allow users to read, agree to, and sign the terms and conditions of the app. To resume building, let's follow these steps:

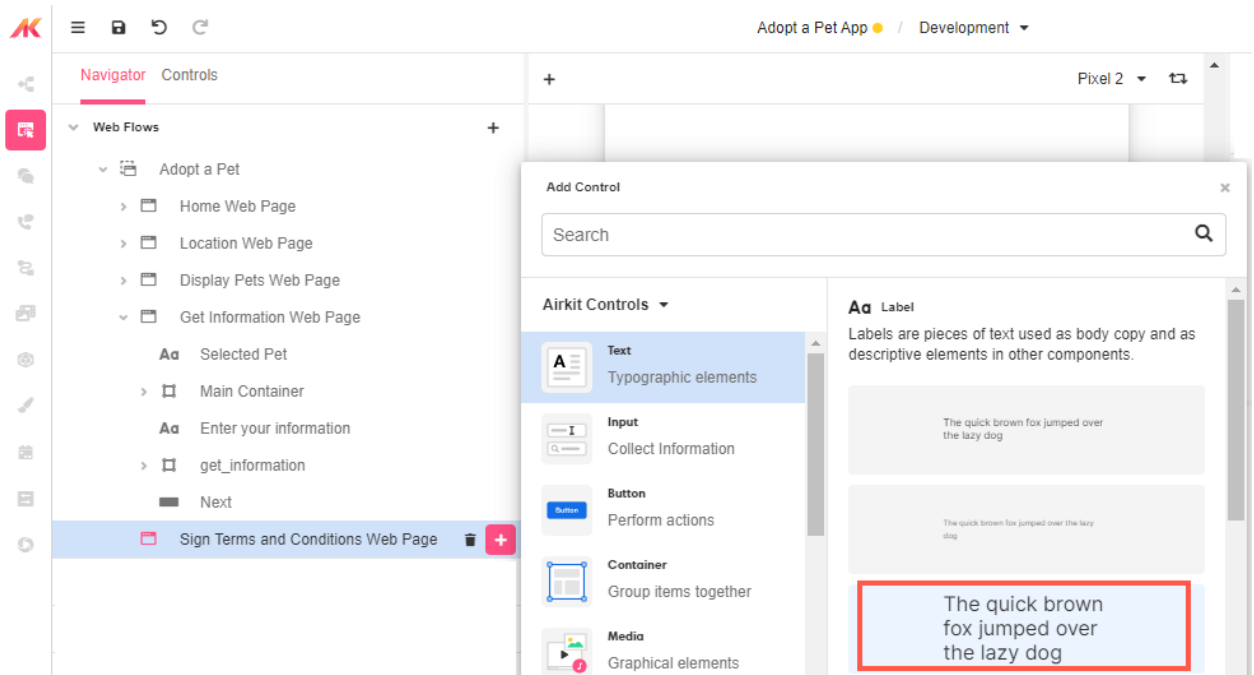

### Creating the Variables

1. In Web Builder, at the Web Flow level, go to the General tab in the Inspector section, to add the following Variable of type Asset that is going to be used later on in this Web Page:
  - a. signature

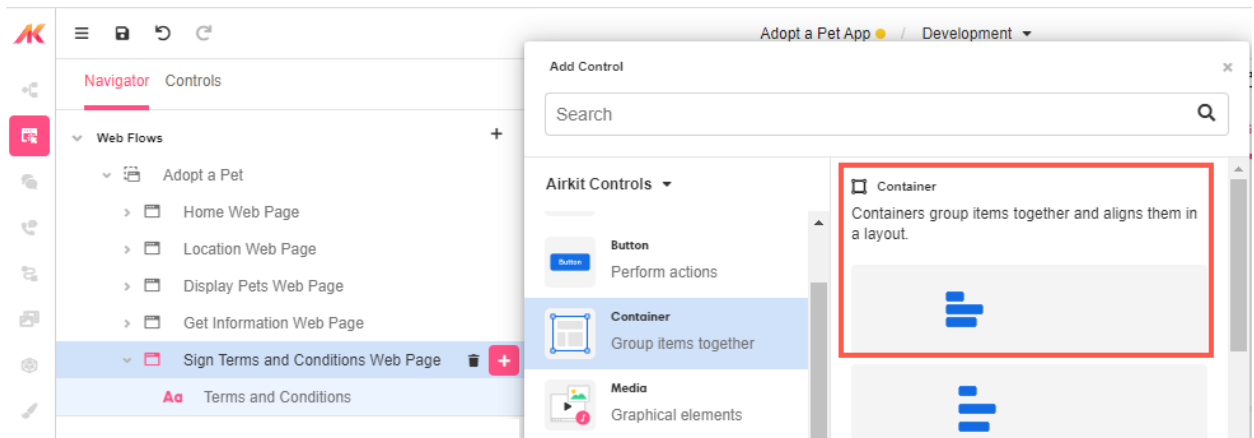

## Adding and Configuring Controls

1. In Web Builder, rename the fifth Web Page to Sign Terms and Conditions Web Page and click on the '+' icon next to it to add a Label.

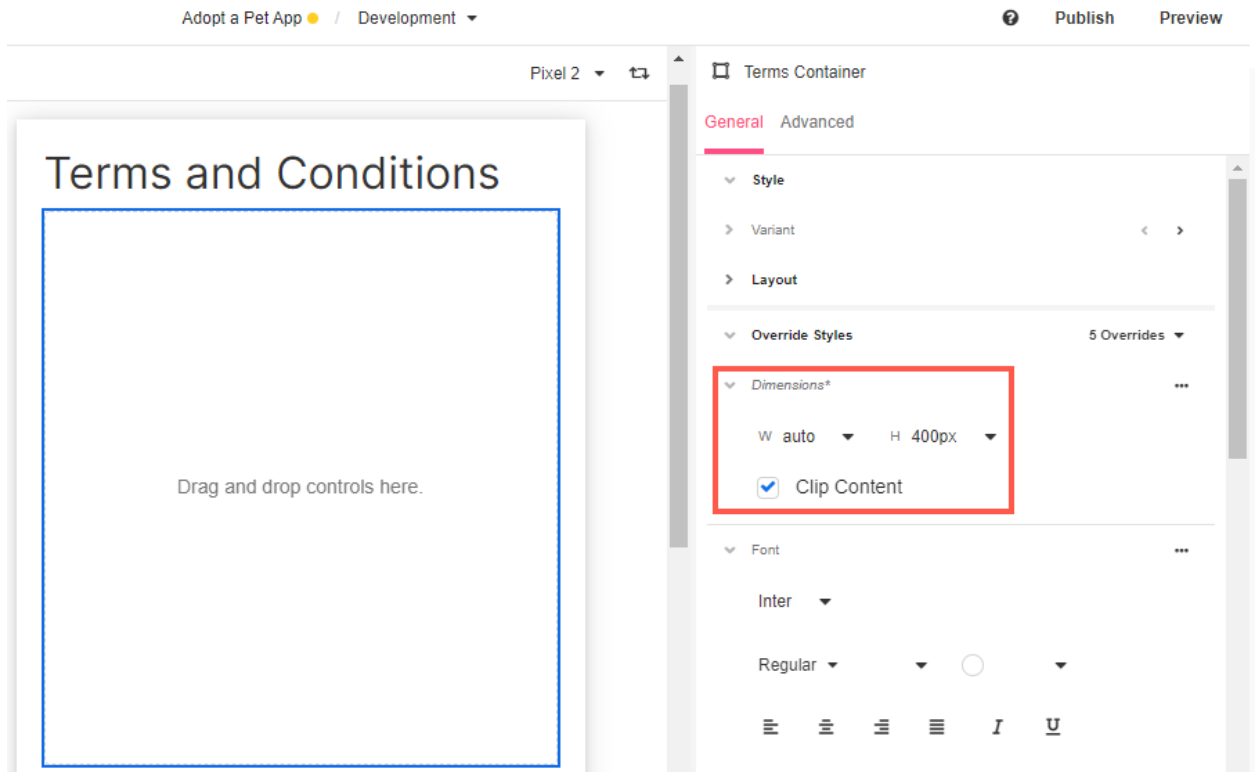

Let's rename it to "Terms and Conditions" and select the headingLabel Variant.

2. Then add a Container and rename it to "Terms"

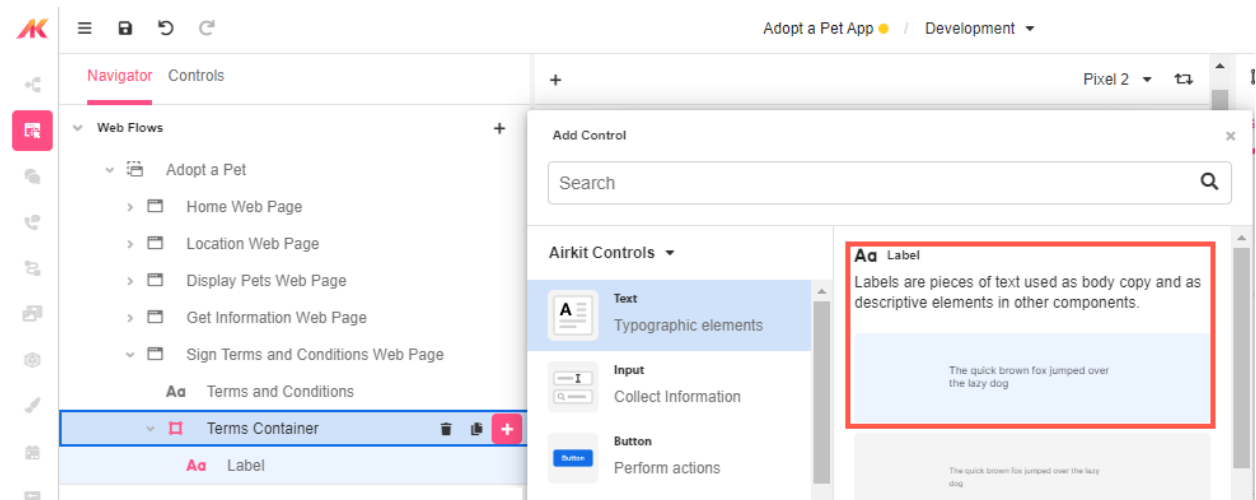

## Configuring the Terms Container

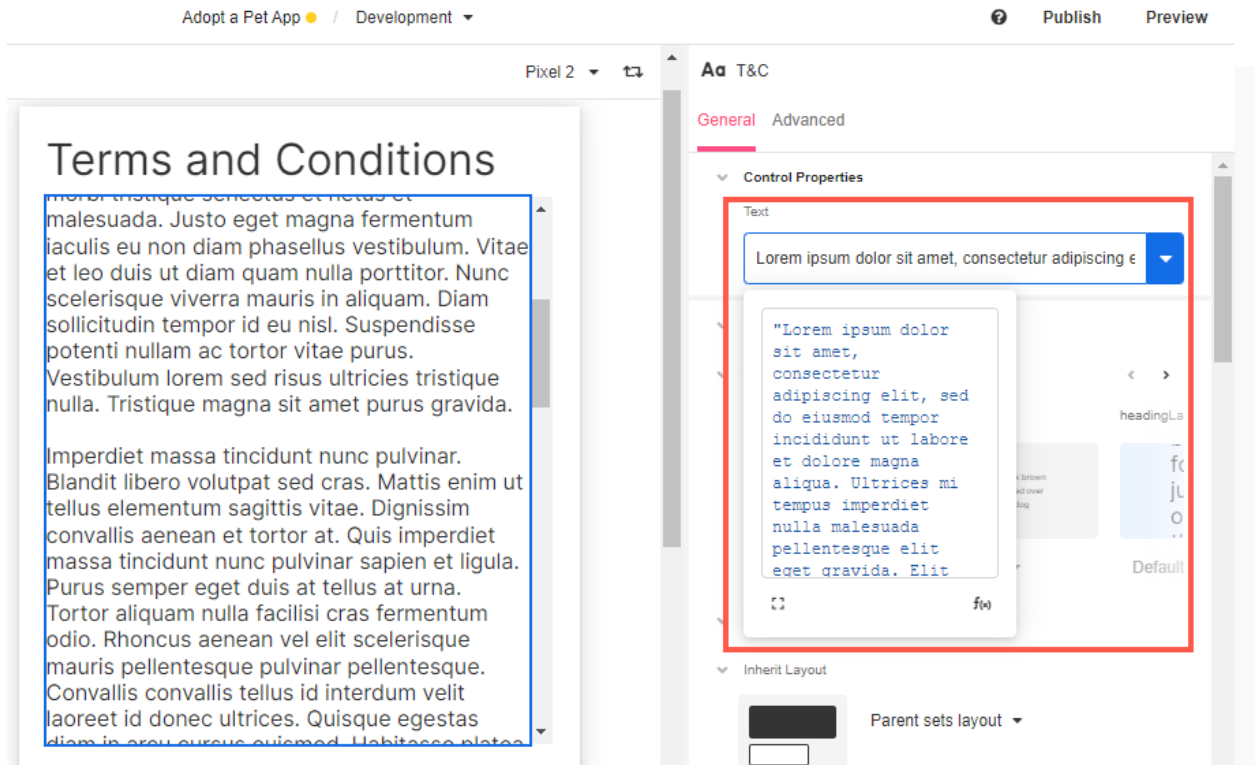

1. With the Terms Container selected, fix its height to 400px and check the Clip Content box.

- Then add a Label control inside the container.

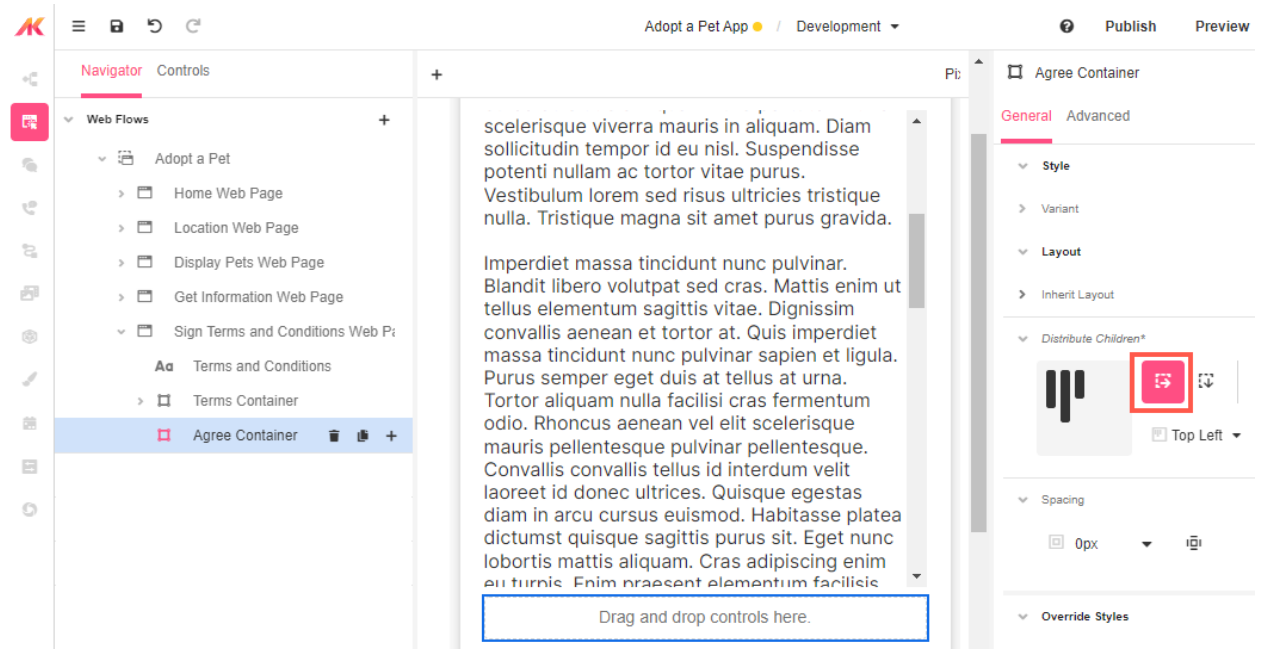

- Since we want this container to display the app's terms and conditions, for building purposes, let's add some sample data that looks as such (you can get some from a *Lorem Ipsum* generator) and paste it in Control Properties > Text.

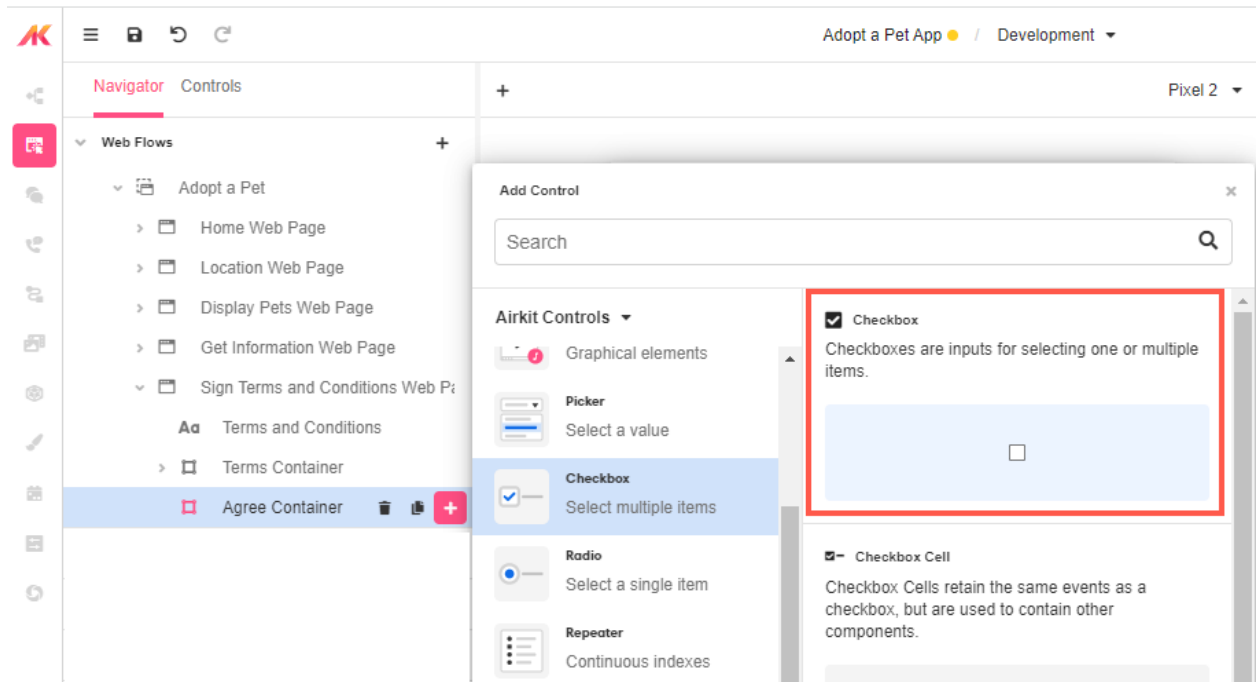

#### 4. Save the app.

### Configuring the Agree Container

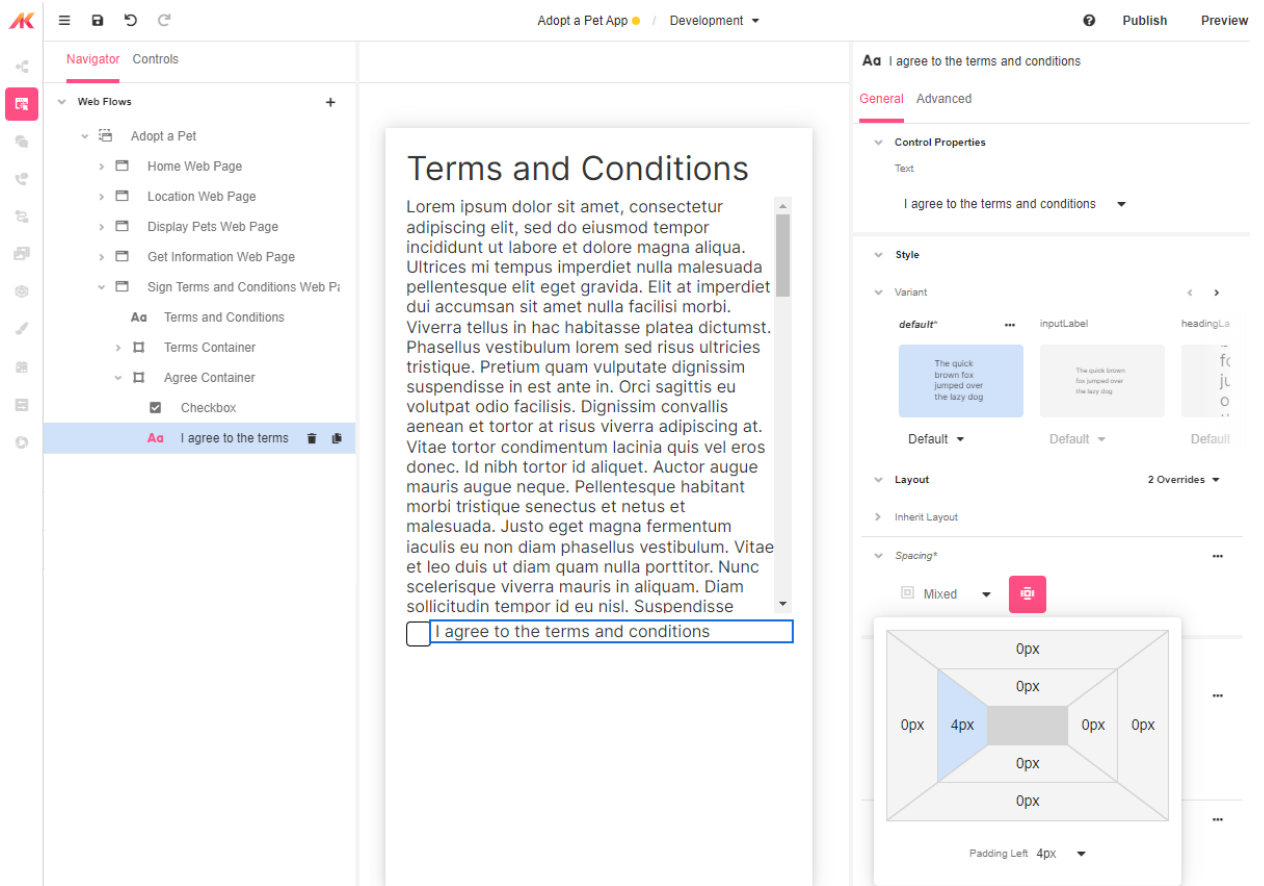

1. At the Web Page level, add another container and rename it to “Agree Container”. Then, so that its components sit side by side, go to Control Properties > Distribute Children and select Stack Horizontal.

2. Inside the container, add a Checkbox to allow users to agree to the T&C.

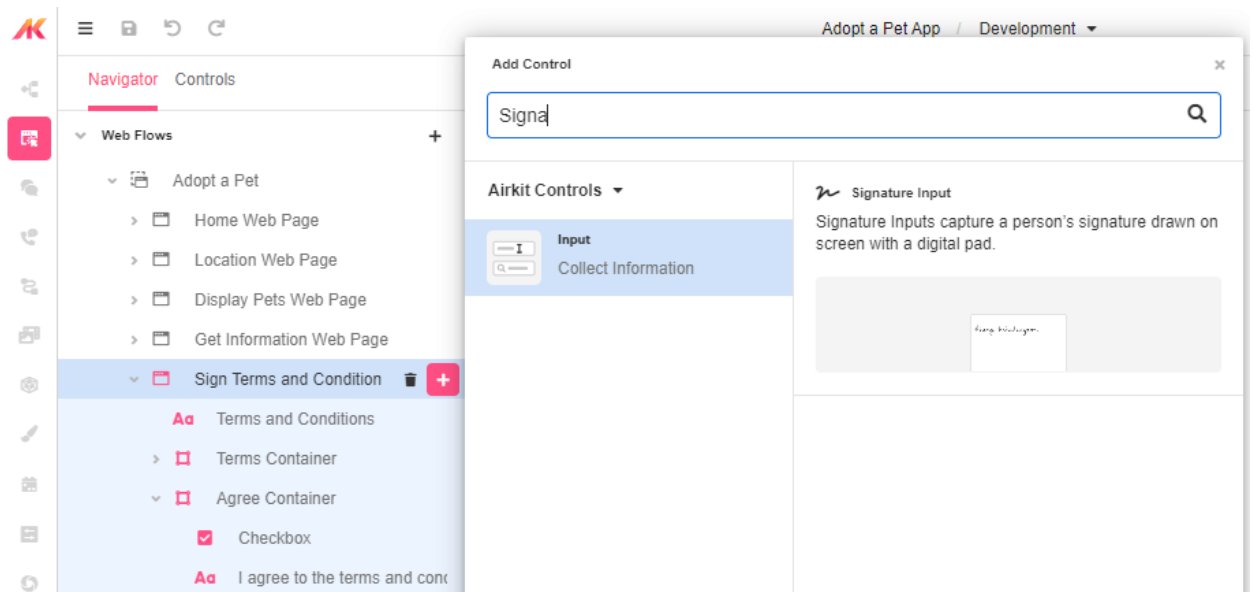

3. Then add a Label and change its text to "I agree to the terms and conditions". Also, to space the text a little bit from the Checkbox, in Control Properties > Spacing, select a left padding of 4px:

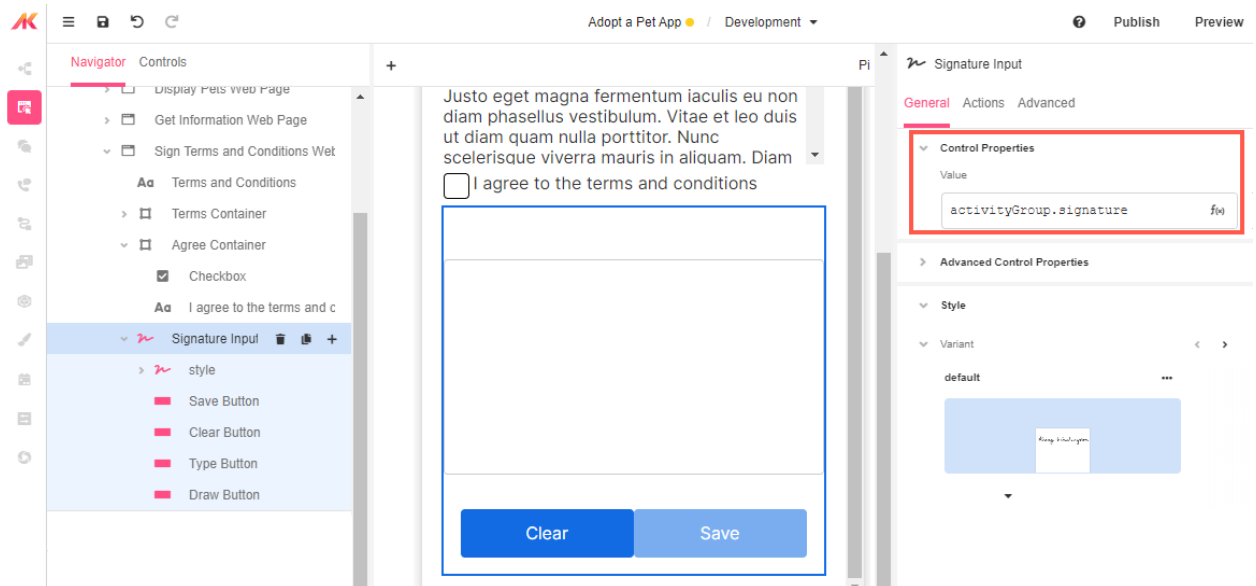

4. Save the app.

## Configuring the Signature Input

1. At the Web Page level, add a Signature Input so that users can also sign after agreeing to the T&C.

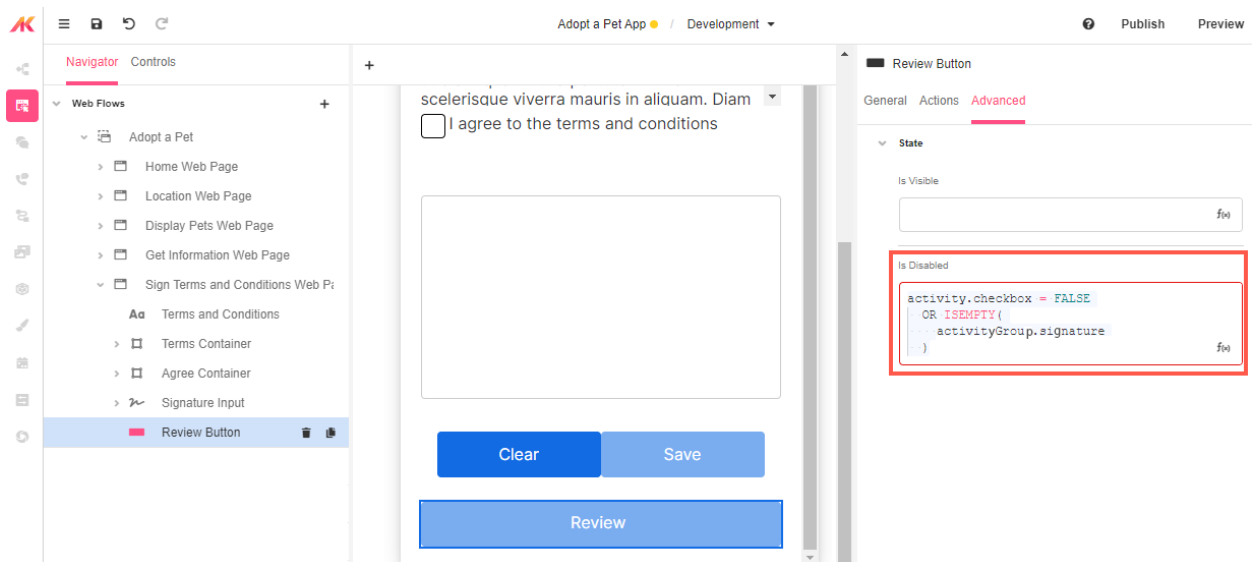

2. Then, in Control Properties, add the variable we have created at the beginning of the chapter: “activityGroup.signature”

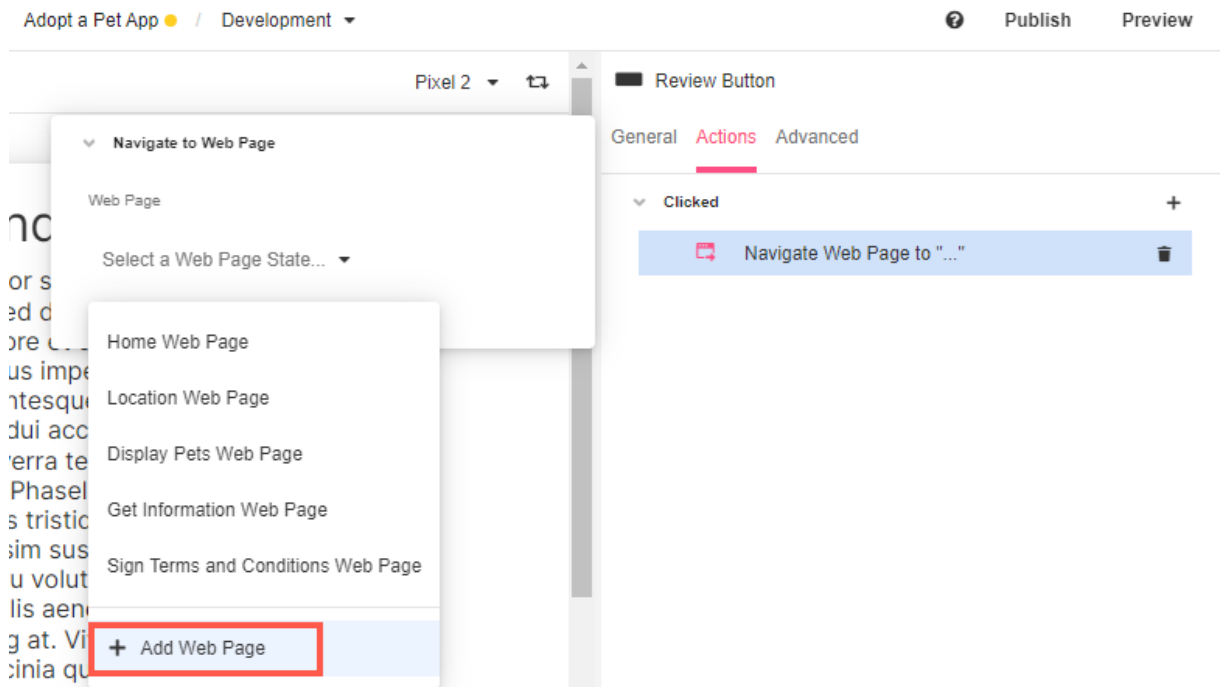

## Configuring the Review Button

1. At the Web Page level, add a Button and rename it to “Review”. Also, in the Advanced tab of the Inspector section, let’s add the following validation in the Is Disabled box:  
**activity.checkbox = FALSE**  
**OR ISEMPTY(**  
**activityGroup.signature**  
**)**

Since agreeing to the terms and conditions is mandatory to move forward, this validation makes sure users don't skip this step.

2. Finally, go to the Actions tab, add the Navigate to Web Page action to this same button and select Add New Web Page to continue building the app in the next Chapter.

3. Save the app.

## Previewing the Terms & Conditions Web Page

Go to Preview to check that the Terms & Conditions Web Page of your app is running smoothly. After reading the text, select the checkbox and enter your signature. Then click on Review.
